

Function	Replace Function
ConvertDateTime()	☐
Current Expression	
..ConvertDateTime(target.{ORCgrp(1).OBRgrp(1).OBR:ObservationDateTime.Time})	
Function Description	
Takes string value representing a date/time value in format informat and converts it to a date/time string in format outformat . Any %f elements in outformat will be replaced with the outf string. If the input string does not match informat , it will be output unchanged. The default for both input and output formats is ODBC format (%Q) in the server's local timezone.	
value	
target.{ORCgrp(1).OBRgrp(1).OBR:Observatic	
Default value: ""	
informat [Optional]	
Default value: ""%Q"	
outformat [Optional]	
Default value: ""%Q"	
outf [Optional]	
Default value: ""
